

Volunteers, ages 6-40 needed for Research Study

Dr. David Herrmann (Dept. of Neurology) at the University of Rochester in upstate NY, is conducting a research study of Friedreich's Ataxia. The study will evaluate how well different methods work, to measure how Friedreich's Ataxia progresses

People with FA and people without FA are needed for this study

Study procedures:

- Brief neurological exam
- Sensory testing
- Photograph a small area of your hand & foot, using a microscope that can look into the skin
- Nerve conduction testing – optional for some subjects
- Skin biopsy – optional for some subjects

RSRB-University of Rochester-Approval
RSRB No. 56091
Expires August 31, 2016
-cj-

Altogether, the study visit takes up to 8 hours

If you have FA, you will be asked to complete 3 study visits over a year.

If you do not have FA, you will be asked to complete only one study visit.

You will be paid \$100 for each completed study visit. Some funds are available for travel expenses for people who have FA and people in their family without FA.
